ABSTRACT

This research will be guided by the following objectives; to examine the influence of identification of procurement requirements on procurement performance, to examine the influence of supplier identification on procurement performance, to identify the importance of supplier selection criteria on procurement performance, to examine the influence of procurement performance in the ministry of housing.

The data analysis will be done using statistical tools such as mean, mode, median. Descriptive statistics incorporating use of frequencies and percentages will be used.

Finally frequency distribution representation, tables and charts will be used to present the results obtained.
